Software Engineer with 4+ years of experience building and automating microservices and cloud infrastructure at IBM Cloud. Proficient in Go, Python, Docker, and Kubernetes. Focused on shipping automation that reduces manual toil and keeps infrastructure stable. Active open-source developer with 20,000+ downloads across published CLI and AI tools.

EXPERIENCE

Tata Consultancy Services

Cloud Software Engineer – Client: IBM Cloud

July 2022 – Present

Bangalore, Karnataka

- Built a Python CLI to provision complex Kubernetes network topologies for large-scale load testing. It parallelizes resource generation to spin up thousands of network objects in minutes, cutting setup time by 95%.
- Added live environment simulation, node-specific targeting, and real-time metrics. Replaced older sequential scripts and became the standard CRD validation tool across 4+ teams.
- Wrote a 2-pass Kubernetes garbage collection controller in Go to replace unreliable cron jobs. Runs as a native reconciliation loop, eliminating 99% of orphaned cloud resources and the manual cleanup work that came with them.
- Led the logging migration from Mezmo (LogDNA) to IBM Cloud Logs across 3 core cluster controllers, standardizing pipelines, dashboards, and alerting rules to improve observability and reduce costs.
- Maintained cluster controller stability by resolving runtime panics, patching concurrency bugs, and shipping incremental enhancements across the team's core microservices.

Halcyon

Co-Founder & Lead Developer

March 2020 – April 2022

Coimbatore, Tamil Nadu

- Bootstrapped a freelance software agency during college, owning end-to-end architecture and delivery of 5+ full-stack projects — inventory systems, billing tools, and marketing sites for local businesses.

TECHNICAL SKILLS

Languages: Go, Python

Cloud Platforms: IBM Cloud, AWS

Container Orchestration: Docker, Kubernetes, OpenShift

APIs & CI/CD: gRPC, REST, Jenkins, GitHub Actions

Databases: PostgreSQL, MongoDB, Firestore

Monitoring: Prometheus, Grafana

CERTIFICATIONS & PAPERS

AWS Cloud Practitioner - **AWS**

IBM Cloud Advocate V2 - **IBM**

Paper: Deconstructing the Netflix Machine: A Case Study of Netflix's Production-to-Delivery Cloud Ecosystem – **SSRN**, Sep 2025

EDUCATION

Coimbatore Institute of Technology

Bachelor of Engineering in Computer Science (CGPA - 8.7/10)

June 2019 – April 2022

Coimbatore, Tamil Nadu

PSG College of Technology

Diploma in Electronics and Communication Engineering (CGPA - 9.5/10)

June 2016 – April 2019

Coimbatore, Tamil Nadu

PERSONAL PROJECTS

CLI & Developer Tools

| **Go, Python, TypeScript**

- Built **FFmpeg-this**, a Python CLI that abstracts FFmpeg's complex flag syntax into clean, chainable commands for media processing. **8,000+ downloads** on PyPI.
- Created **Kessler**, a Go TUI & VS Code extension that scans **30+ language ecosystems** for stale build caches and dependency artifacts, safely reclaiming disk space with a rules engine that protects active projects and respects version control state.
- Built **Scync**, a zero-knowledge secrets manager with AES-256 client-side encryption and WebAuthn PRF biometric unlock. The server receives only encrypted blobs, plaintext is architecturally unreachable. Published on Product Hunt and Peerlist.

AI Developer Tools

| **Python, Go, Ollama**

- Wrote **Enhance**, a prompt engineering CLI that rewrites and enriches prompts locally via Ollama for better LLM outputs, no cloud APIs, no costs. Published on PyPI with **13,000+ downloads**.
- Created **Localseek**, a VS Code extension for fully offline AI code assistance via local models, no code ever leaves your machine. **500+ installs** on the marketplace.

SpendWiser

| **React, Firebase, Netlify**

- Built an Android SMS listener (BroadcastReceiver + Headless JS) that intercepts OS-level bank transaction alerts and forwards them to a self-hosted API, replacing third-party bank-sync services like Plaid with a free, self-hostable alternative.
- Parses raw SMS into structured transaction data on-device using a local LLM, displayed on a real-time React + Firebase spending dashboard. Zero recurring costs.
