Software Engineer with 4+ years of experience building and automating microservices and cloud infrastructure at IBM Cloud. Proficient in Go, Python, Docker, and Kubernetes. Dedicated to maximizing system reliability and reducing operational toil through automation. Active open-source developer, shipping CLI tools and utilities with 20,000+ total downloads.

EXPERIENCE

Tata Consultancy Services

July 2022 – Present

Cloud Software Engineer – Client: IBM Cloud

Bangalore, Karnataka

- Built a Python CLI to provision complex Kubernetes network topologies for large-scale load testing. It parallelizes resource generation and application to spin up thousands of network objects in minutes, cutting setup time by 95%.
- Added advanced testing features like live environment simulation, node-specific targeting, and real-time metrics. It replaced older sequential scripts and became the standard tool for CRD validation across 4+ teams.
- Wrote a 2-pass Kubernetes garbage collection controller in Go to replace unreliable cron jobs. It runs as a native reconciliation loop, eliminating 99% of orphaned cloud resources and manual cleanup toil.
- Led the logging migration from Mezmo (LogDNA) to IBM Cloud Logs across 3 core cluster controllers. Standardized the logging pipelines, dashboards, and alerting rules to improve observability and reduce costs.
- Maintained the team's cluster controllers by fixing runtime panics, patching concurrency bugs, and shipping general code enhancements to keep the infrastructure stable.

Halcyon

March 2020 – April 2022

Co-Founder & Lead Developer

Coimbatore, Tamil Nadu

- Bootstrapped a freelance software agency during college, managing the end-to-end architecture and delivery of 5+ full-stack projects (inventory systems, websites) for local businesses.

TECHNICAL SKILLS

Languages: Go, Python, JavaScript

CI/CD & APIs: gRPC, REST, Jenkins, Azure DevOps

Cloud Platforms: IBM Cloud, AWS

Databases: PostgreSQL, MongoDB, Firestore

Container Management: Docker, Kubernetes, OpenShift

Monitoring: Prometheus, Grafana

CERTIFICATIONS & PUBLICATIONS

AWS Cloud Practitioner - **AWS**

IBM Cloud Advocate V2 - **IBM**

Paper: Deconstructing the Netflix Machine: A Case Study of Netflix's Production-to-Delivery Cloud Ecosystem – **SSRN**, Sep 2025

EDUCATION

Coimbatore Institute of Technology

June 2019 – April 2022

Bachelor of Engineering in Computer Science (CGPA - 8.7/10)

Coimbatore, Tamil Nadu

PSG College of Technology

June 2016 – April 2019

Diploma in Electronics and Communication Engineering (CGPA - 9.5/10)

Coimbatore, Tamil Nadu

PERSONAL PROJECTS

CLI & Developer Tools

| **Go, Python, TypeScript**

- Built **FFmpeg-this**, a Python CLI wrapper that abstracts FFmpeg's complex flag syntax into clean, chainable commands for media processing. **8,000+ downloads** on PyPI.
- Created **Kessler**, a Go TUI & VS Code extension that scans **30+ language ecosystems** for stale build caches and dependency artifacts, safely reclaiming disk space with a rules engine that protects active projects and respects version control state.
- Built **Scync**, an open-source zero-knowledge secrets manager with AES-256 client-side encryption and WebAuthn PRF biometric unlock. Server receives only encrypted blobs, plaintext is architecturally unreachable. Published on Product Hunt and Peerlist.

AI Developer Tools

| **Python, Go, Ollama**

- Wrote **Enhance**, a prompt engineering CLI that rewrites and enriches prompts locally via Ollama for better LLM outputs, no cloud APIs or costs involved. Published on PyPI with **13,000+ downloads**.
- Created **Localseek**, a VS Code extension that provides AI-powered code assistance entirely offline using local models — no code ever leaves your machine. **500+ installs** on the marketplace.

SpendWiser

| **React, Firebase, Netlify**

- Developed an Android SMS listener (BroadcastReceiver + Headless JS) that intercepts bank transaction alerts and forwards them to a self-hosted API, replacing expensive bank-syncing services like Plaid with a fully free, self-hostable alternative.
- Parses raw SMS into structured transaction data on-device using a local LLM, displayed on a real-time React + Firebase spending dashboard. Zero recurring costs.
